

Statement for students of the MPC-MLR course Machine Learning

Winter semester 2025/2026

Computer classes are compulsory. A maximum of two excused absences is allowed. Missed computer labs cannot normally be made up at a different time; in the case of prolonged absence for serious reasons, compensation may be arranged individually with the instructor.

A maximum of 30 points can be obtained during the semester and a maximum of 70 points in the final examination, for a total of 100 points.

Students are required to come to the computer exercises with knowledge of the topics already covered. Knowledge will be continuously assessed through six tests during the semester (each test worth a maximum of 5 points). Retakes are not permitted. The specific dates and topics of the tests will be announced in advance via the e-learning system. Three tests will focus on practical tasks, and three will cover theoretical topics.

To obtain credit, students must meet the following requirements:

- attend all computer labs, with a maximum of two excused absences allowed,
- obtain at least 15 points from the semester tests.

Obtaining credit is a prerequisite for admission to the final examination.

The final oral exam is worth a maximum of 70 points. A minimum of 35 points is required to pass.
